Overview

Transportation 2050 (T2050) builds upon the work done by the two prior Transportation Task Forces.

Transportation 2050 – Needs and Gaps

The SFMTA took the vision of ConnectSF and the capital needs in the agency’s capital plan and looked at operational and capital needs for the next 30-years.

**ConnectSF**
- Vision for the Transportation System
- Supported by Federal / State / Local resources
- Includes investments in Service and Infrastructure

**20 Year Capital Plan**
- 20 Years of Fiscally Unconstrained Infrastructure Needs identified in long range plans as well as additional needs identified by stakeholders.
- Includes needs to maintain the system as well as expand.
- Informs 5-Year Constrained Capital Improvement Program

**5-Year Capital Improvement Program (CIP)**
- 5-Year financially constrained program of projects
- Includes detailed revenue projections for 30+ funding sources (Sales Tax, Federal Funds, State Funds, Regional Funds)
- Programs funds to phases of project planning, design and implementation.

Reference: Transportation 2050
For just capital we have refined our estimates to a year-by-year model.

INVESTING EQUITABLY

Fast and Convenient Transit
More Repairs and Maintenance
Improving Safety and Access

$10.6B
What the vision will require us to spend over 10-years

$4.3B
We will spend over the next 10-years (all sources)

($6.3B)
T2050 Funding Gap
Cumulative total over 10-years
Fed Infrastructure Bill

On November 15, 2021, H.R. 3684, the “Infrastructure Investment and Jobs Act,” was signed reauthorizing surface transportation programs for five years and one-time additional funds for key infrastructure priorities including transportation.

- Federal formula funds are distributed by the Metropolitan Transportation Commission (MTC) through the Transit Capital Priorities Program

| Preliminary Projected Increase for San Francisco - Oakland UZA* in FY22 |
|-----------------------------|-----------------|-----------------|
| § 5307                      | 31%             |
| § 5337 Fixed Guideway State of Good Repair | 18%             |

*Provided by MTC staff in September, 2021.

- Historically, SFMTA has received a significant portion of these funds towards its light rail and motorcoach fleet replacement program and receives about one third of fixed guideway funds towards replacing and rehabilitating its fixed guideway and train control system.
The infrastructure bill also provided significant plus ups to competitive programs as well as creating several new programs focusing on climate change and traffic safety.

The SFMTA is a frequent competitor for many of these funds and particularly anticipates benefitting from the plus ups to these programs.

The value of assets beyond their useful life is $3.83 billion. This backlog represents deferred investments in infrastructure replacement or rehabilitation. The backlog represents assets where an end-of-lifecycle decisions needs to be made; either these assets will be retired, replaced in-kind, or upgraded with new technology or systems.
Age Based Condition Scores are based on the age of an asset and use a scale of 1 to 5. The weighted average condition score for all SFMTA assets in FY2020 is 3.07.

Fast and Convenient Transit

A majority of survey respondents say it is “very important” or “extremely important” to...

- **80%** Provide quick, convenient transit access to all parts of San Francisco
- **76%** Reduce delays to make Muni more reliable
- **65%** Reduce crowding on Muni

Source: San Francisco citywide survey conducted by FM3, April 2021
More Repairs and Maintenance

A majority of survey respondents say it is “very important” or “extremely important” to...

- **80%** Repair and maintain Muni equipment and facilities to ensure vehicles’ safety, frequency, and reliability
- **68%** Address the backlog of maintenance work
- **67%** Rebuild San Francisco’s aging rail network

Source: San Francisco citywide survey conducted by FM3, April 2021
Improving Safety and Access

A majority of survey respondents say it is “very important” or “extremely important” to...

Ensure Muni service is inclusive and accessible to all

Make street safety improvements for walking

Source: San Francisco citywide survey conducted by FM3, April 2021
Key elements to consider in programming general obligation bonds includes the following:

**Project Delivery**
- Projects can proceed with significant cashflow within 1-3 years
- Project concepts, and initial planning and outreach largely complete
- Staffing resources are in place to deliver the project as programmed

**Delivered Asset**
- Projects should deliver tangible assets or extend the life of assets
- Overall the assets should have a useful life of 15 years or more
- Typically civil, transit infrastructure, building or signal infrastructure

**Critical Need**
- Gap in funding exists based on existing planning documents or work
- Projects or programs have few other funding alternatives (state, federal)

**TOTAL**                                                                                                      **$400**
Make the Transportation System Work Better
Repair, upgrade, and maintain aging facilities and equipment

Program Summary
To speed up Muni repairs and maintenance and keep public transit moving, we will repair, renovate, and modernize SFMTA bus yards, facilities, and equipment through the agency’s Building Progress program.

Project Prioritization Criteria
- Equity
- Access
- Safety

Why is this program important?
Efficient and timely repairs to buses and trains increases Muni’s reliability and saves the SFMTA money.

Larger yards provide needed space for a growing Muni fleet.

Improved working conditions for frontline staff give them modern tools and space to efficiently do their jobs in earthquake-ready facilities.

SFMTA is working towards a 100% zero-emission fleet as part of its leadership in confronting climate change. Renovated yards will support the electric vehicle charging infrastructure needed to achieve a zero-emissions fleet.

$250M
2022 Muni Reliability and Street Safety Improvement Bond

$250M

Make the Transportation System Work Better
Repair, upgrade, and maintain aging facilities and equipment

Electrification Infrastructure (Trolley & E-Bus)

Seismic Upgrades & Building Replacement

Bus Washers & Maintenance Bay Replacement

Capacity Expansion for Growing Fleet
Make the Transportation System Work Better
Muni Network Improvements

**Program Summary**
Muni Network Improvements consist of smart traffic signals, wider sidewalks and bus bulbs, and dedicated transit lanes to reduce travel times and keep buses and rail moving.

**Project Prioritization Criteria**
- Ridership
- Service Frequency
- Equity
- Network Connectivity

**Why is this program important?**
Improvements will go to routes that carry 80% of Muni riders including passengers who depend most on public transportation.

Improvements will go to routes that have shown crowding during peak hours in winter of 2020.

Transit priority improvements have demonstrated 10-25% travel time savings in past projects. Collectively, these improvements support a more reliable bus and rail network.

Freeing buses from traffic allows Muni to serve more people with less resources. These savings can be reinvested in the system.
$26M

Make the Transportation System Work Better

Muni Network Improvements

Dedicated Transit Only Lanes

Transit Signal Priority & Signal Upgrades

Boarding Improvements (Islands & Sidewalks)

Travel Time Reduction Improvements/Projects
Make the Transportation System Work Better
Muni Rail Modernization, primarily upgrading the train control system.

Program Summary
Modernize systems that are key for operating the transit system. Replacing the aging train control system, wayside signals, switch machines, and supporting guideway infrastructure.

Project Prioritization Criteria
- Ridership
- Service Frequency
- Equity
- Network Connectivity

Why is this program important?
Modernized train management leads to more efficient operations and reduces bunches and gaps between trains.

New train communications systems allows for longer trains, reduced crowding, and capacity for future growth.

The current aging train control system is frequently responsible for slowdowns in the Market Street Subway, upgrading this system would make the schedule more dependable and travel times more consistent.

The new train control system will complement Muni’s new light rail fleet to optimize the riding experience for Muni patrons.
$10M

Make the Transportation System Work Better
Muni Rail Modernization, primarily upgrading the train control system.

Automatic Train Control System Replacement

Surface Train Control

Tunnel & Infrastructure Improvements

Upgrade to Computer Based Train Control
2022 Muni Reliability and Street Safety Improvement Bond

*Improve Street Safety and Traffic Flow*

*Traffic Signal and Street Crossing Improvements in Equity Neighborhoods*

**Program Summary**
Traffic signal upgrades improve safety and visibility at intersections and other places where people may be crossing the street.

**Project Prioritization Criteria**
- Equity
- Collision History
- Traffic Volumes
- Multiple Mode Benefits

**$42M**

*Why is this program important?*
Signal upgrades make intersections work for everyone, especially people with disabilities and other vulnerable road users.

Improvements will be made on the High Injury Network where a preponderance of traffic deaths and severe injuries are concentrated. Streets in historically disadvantaged communities are almost twice as likely to be on the High Injury Network.
$42M

Improve Street Safety and Traffic Flow
Traffic Signal and Street Crossing Improvements in Equity Neighborhoods

Traffic Signal & Infrastructure Replacement
Audible Pedestrian Signals
Pedestrian Countdown Signals
Corridor and Full Intersection Improvements
2022 Muni Reliability and Street Safety Improvement Bond

Improve Street Safety and Traffic Flow
On-Street Improvements

Program Summary
Redesigning major corridors of the public right of way enhances the quality and use of public spaces, improves safety for all street users, improves Muni access and service, and fixes critical aging transportation infrastructure.

Project Prioritization Criteria

<tr>
<th>Collision History</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equity Neighborhoods</td>
</tr>
<tr>
<td>Nearby Destinations</td>
</tr>
<tr>
<td>Community Requests</td>
</tr>
</tbody>
</table>

Why is this program important?
This program will focus on quality-of-life improvements along key corridors by providing a better experience for residents, visitors, and workers who bike, walk, and take transit.

The program builds on near-term improvements designed to address collision and fatality trends to transform corridor street design and make safety improvement more permanent.

Multimodal enhancements will support increased housing density, affordability, and mobility.

Corridor improvements to support existing and new investment in commercial corridors.
$42M

Improve Street Safety and Traffic Flow
On-Street Improvements

Corridor Bicycle Network Improvements

Corridor Pedestrian Safety Improvements

Complete Street Corridor Improvements
Improve Street Safety and Traffic Flow
Speed Management Program

**Program Summary**
Implement proven interventions to slow motor vehicle speeds and improve safety, such as application-based residential traffic calming, lowered speed limits along neighborhood corridors, and speed radar signs to improve driver awareness.

**Project Prioritization Criteria**
- Collision History
- Equity Neighborhoods
- Nearby Destinations
- Community Requests

**Why is this program important?**
Every year in San Francisco, about 30 people lose their lives and over 500 more are seriously injured while traveling on city streets.

The higher the speed of a crash, the higher the chances are that someone will be killed or seriously injured.

This program invests in street design that supports slower speeds to protect lives.
